Sprint #2 Project Planning

[Format: JDF- submit a pdf file]

1. Establish the topic officially with mentor
2. Start on Sprint: consists of;
    a. supplemental research,
    b. technical design,
    c. and an implementation plan (tasks and timeline).

The submission includes:

Part 1 - Project Topic (around 1 page, up to 2 pages.)

a brief introduction to your project in alignment with your mentor expectations

a. Background
   A short background on the project topic.
   consist of major or foundational research, general descriptions of the problem you will be addressing.
b. Justification
   illustrate why your project matters.
c. Solution
   high level narrative description of your solution.
   Describe what you are building or the research you are undertaking.
   This solution should be a logical approach from your background and justification.

Part 2 - Technical Design (narrative/list portions should be fairly short (under a page). May include images and diagrams.)

lay out the preliminary technical design for your project.

a. Tools/Technology
   simple list of any tools/technology you will be using:
   programming languages and frameworks, hosting services or other delivery methods,
   as bulleted list.
b. Datasets and Data Sources
c. Architecture Diagram
   simple architecture diagram of your solution.
d. Screen Mock-up(s)
   One is enough

Part 3 - Implementation Plan

a. Project tasks
   a list of high level tasks to be executed in order to complete your project.
   tasks titles should be self-explanatory in the context of your project.
   Include the project sprints on this to go with your timeline.
   (You are free to lay these out in a Kanban board or any tool that can track tasking (e.g. Jira, GitHub Projects, etc.) and provide a screenshot or link.)

b. Project Timeline
   Provide a timeline to go with each task, as start date and end date. (break it down by week)
   (You may combine the project timeline and task lists into a single table.)
c. Needs/Risks
   can be major dependencies or areas of vulnerability that would disrupt the project if not addressed.
   risk would also include anything that which may be a potential failure.
   (You may include this in a table alongside the tasks and timeline.)
